Abstract

Hand-held Image Capture Apparatus

a combined (1) comprises: An image capture apparatus 5 (2) swipe scanner (4), electronic camera and electronic camera (2) having an associated optical system and detector array (12) for remote capturing of a first image (46) and the swipe scanner (4) having an associated optical system (28) and detector array (34) for 10 swipe capturing of a second image (38); and a data storage means arranged to store the first image (46) second image (38) in association with each other. The electronic camera (2) may be a moderate resolution colour camera, and the swipe scanner (4) may have a grey-scale detector (34) array capable of scanning an object at a higher resolution than the camera (2). A display (6) is that both images (38,46) can be so separately in association with each other, or combined into a combination image, which has colour information 20 from the camera (2) to colourize higher resolution pixels from the scanner (4).
